
Money Match

Put your skill on the line.

Skill-based wagering layered on the competitive video games people already play

Skill-based wagering already exists, just not on the games you play.

WAGERABLE TODAY

Skillz and Triumph proved that there's an appetite and existing legal model for skill-based wagering.

But only for simplistic, in-house mobile games built solely for wagering.

NOT WAGERABLE TODAY

Games with real, deep competitive populations have no verified skill-based wagering platforms.

No verified identity. No escrow. No auto-settlement. Nothing safe to stake on.

Skill Contracts.

01 Two or more verified players stake an equal entry

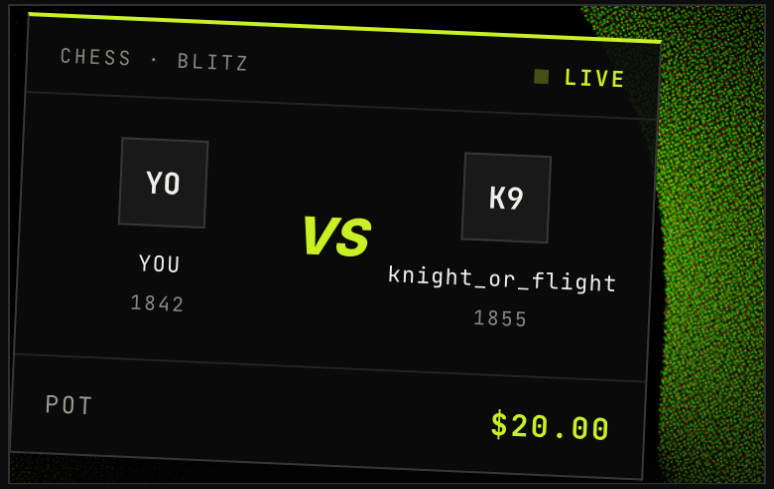

02 Funds are held in an escrowed pot

03 They play a real, ranked match

04 The official game API auto-verifies the result

05 **Winner takes the pot, minus rake**

NO SCREENSHOTS · NO SELF-REPORTING · NO DISPUTES

SEE IT LIVE →

Infrastructure for skill based wagering now exists.

01

Open, mature result APIs

Lichess, Steam/CS2, FaceIt and Riot expose official match results. Verification is now free.

02

Instant payout rails

Venmo, debit and ACH move a payout to a winner in seconds, not days.

03

A post-esports generation

Players who grew up competing expect to play for real stakes, not just rank.

04

Settled skill-contest law

The legal model Skillz and Triumph built on is now the precedent in 37 states.

Rake only. Zero outcome risk.

A fixed, disclosed 5–10% service fee on every settled pot. We never take a directional position.

More liquidity → more pots → more rake

THE INVARIANT

Σ payouts + rake = Σ entries

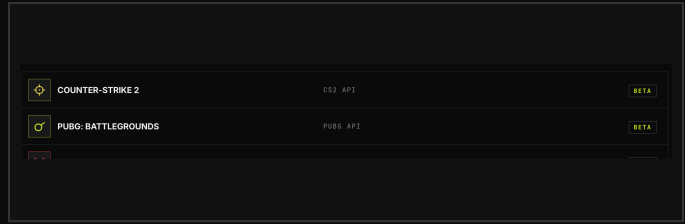

$10 pot — $1 rake (10%)

What's already built.

SHIPPED & LIVE

- ✓ Live result pipelines auto-settling real matches — CS2, Dota 2, PUBG (Chess H2H live)
- ✓ Escrow + rake invariant enforced on every path: Σ payouts + rake = Σ entries
- ✓ Three modes across all games: Head-to-Head, Solo Pools, Tournaments
- ✓ Game-agnostic GameAdapter — new titles are adapters, not rewrites
- ✓ Launch-hardening in place: geofencing, responsible-gaming controls, disputes, KYC/AML readiness, settlement worker, audit ledger
- ✓ 725 automated backend tests passing

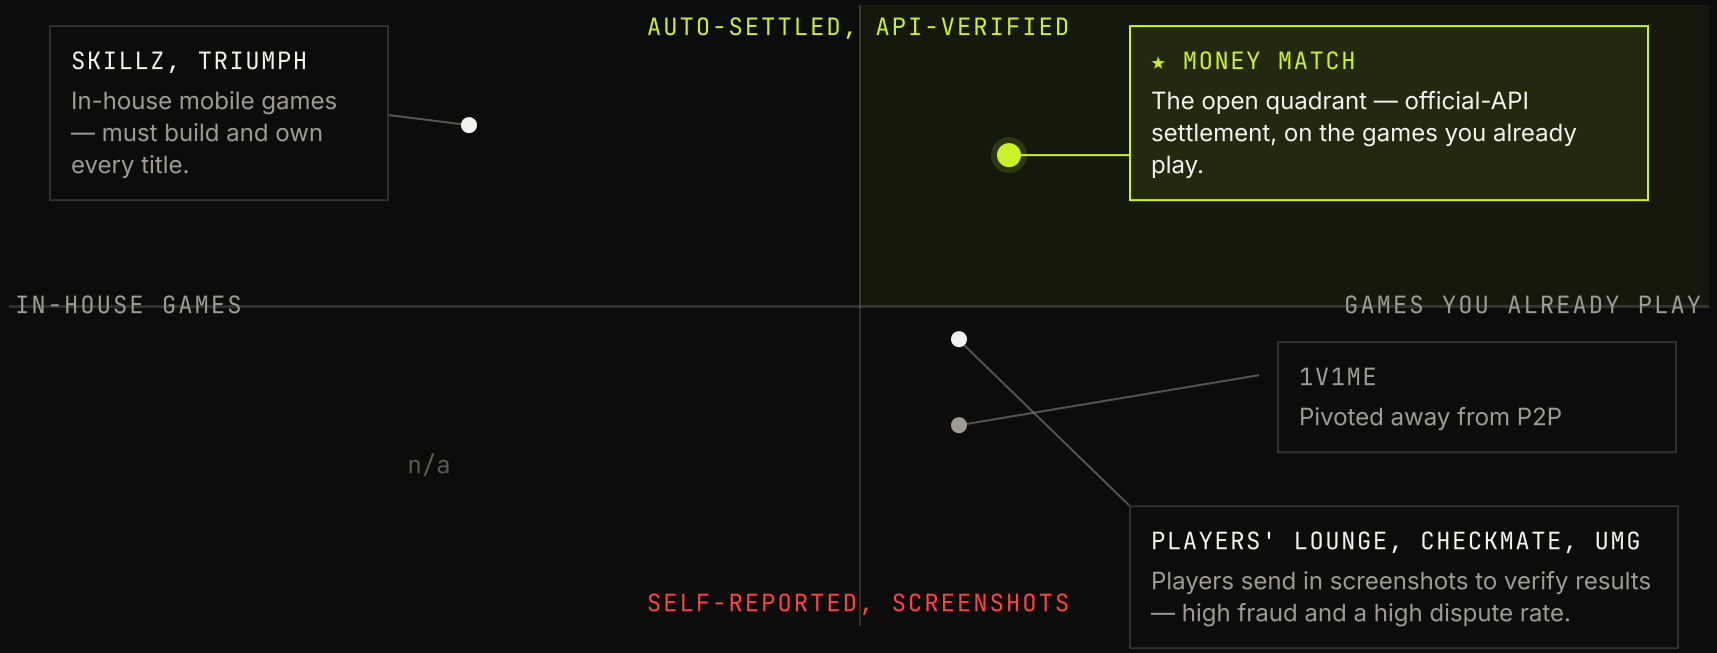

Honest status: pre-launch, pre-revenue. Today's build is a verified play-money proof of the exact rails real money will run on.

Stage A
No-money MVP, private beta (close to completion / Aug 2026 target)

Stage B
Gems economy — legally inert, drives retention while counsel clears

Stage C
Real money — Chess, CS2, PUBG first, in all 37 skill-permitted states

One quadrant is empty. We're in it.
