Money Match

Skill-based wagering layered on the competitive games 200M+ people already play.

RAKE ONLY · ZERO OUTCOME RISK

Wagering already works, just not on competitive games.

Millions already wager real money on Skillz and Triumph, but only on simplistic, in-house mobile games.

People want to wager on competitive games like Chess, Counter-Strike 2, Clash Royale, and Rocket League.

The infrastructure to do this safely — verified identity, escrow, auto-settlement via official game APIs — doesn't exist for these games.

That's the gap.

Skill Contracts.

01 Two verified players stake an equal entry → 02 Funds held in an escrowed pot → 03 They play a real, ranked match → 04 Official game API auto-verifies the result → 05 **Winner takes pot – rake**

THE PIECES EXIST, JUST NOT TOGETHER

Proven model

Skillz and Triumph proved the legal real-money skill-contest model and consumer appetite at scale.

Open game APIs

Lichess, Steam, FaceIt and Riot now expose mature, open result APIs. The verification layer is finally free.

Instant payout rails

Venmo, debit and ACH move money to winners in seconds. Escrow in, payout out.

OUR WEDGE **Skillz & Triumph must build their own games — we plug into games that already have competitive populations, at zero content cost.**

Rake only.
Zero outcome risk.

Every dollar of revenue is a fixed, disclosed service fee on the pot, never a directional position. It scales directly with liquidity and GMV.

More liquidity → more pots → more rake

THE INVARIANT

$$\Sigma \text{ payouts} + \text{rake} = \Sigma \text{ entries}$$

$10 pot

$1 rake

Not a sportsbook. Built around the regulatory map.

PEER-TO-PEER + RAKE, NOT HOUSE-BANKED

- ✓ Players stake into a shared pot
- ✓ House has zero stake in who wins
- ✓ A contest of skill — like poker rake, DFS, Skillz

HOW WE OPERATE INSIDE THE RULES

01

Geofenced launch

Massachusetts + skill-permitted states only

02

14 excluded "Any-Chance" states

Enforced before any entry is accepted

03

KYC / AML at thresholds

Identity and source-of-funds checks at limits

04

Gaming-counsel gate

Sign-off required before any real money moves

NOT CAVEATS. A MAPPED, NAVIGATED SURFACE

A working demo, auto-settling real games.

BUILT & LIVE

- ✓ Live Lichess result pipeline
- ✓ Escrow + rake invariant enforced
- ✓ Game-agnostic `GameAdapter`
- ✓ End-to-end auto-settlement + UX

PLAY-MONEY / FORTHCOMING

- ○ Real-money entries
- ○ KYC / AML onboarding
- ○ Payment-rail integration

Chess today; CS2, Rocket League and Clash Royale are adapters, not rewrites.

▶ TRY THE LIVE DEMO clutchbook.vercel.app

Chess validates. Every new game is an adapter.

LIVE
Chess → CS2 → Dota 2 → League → Rocket League → Valorant

SIZING Skillz / Triumph GMV × the competitive-gaming population, not a generic gaming-market number.

Solving the two-sided liquidity problem.

• LIQUIDITY IS THE REAL EARLY RISK

01 Launch on Chess, a deep rated population

02 Seed early lobbies to guarantee a match

03 Clearly-labeled play-money bots fill gaps

04 Massachusetts + a few states first, then widen

Raising $500k to reach Massachusetts real-money launch.

STEP 01

Production infra

Postgres, audit ledger, settlement worker

→

STEP 02

Payments + KYC partner

Onboarding, identity and payout rails

→

STEP 03

Gaming-counsel sign-off

Legal gate cleared before real money

→

MILESTONE

MA real-money launch

The milestone this round buys
